#### Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

#### Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

APR 5 2000

# THIS PUBLICATION WAS PREPARED UNDER THE DIRECTION OF:

Mike Sheridan, Assistant Chief Statistician, Social Institutions and Labour Statistics (613) 951-9480

Deborah Sunter, Director, Labour Statistics Division (613) 951-4740.

#### LFS Unit Heads:

- Geoff Bowlby, Analysis (613) 951-3325
- Gerry Giroux, Data Processing (613) 951-5850
- Royal Généreux, Processing (613) 951-4725

with the assistance of the staff members of Labour Force Survey Program.

# OTHER SOURCES OF LABOUR FORCE SURVEY DATA:

#### **CANSIM**

Most of the data published in *Historical Labour Force Statistics* (catalogue 71-201-XPB) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). Users interested in accessing data via CANSIM can visit the following internet address: <a href="http://www.statcan.ca/english/CANSIM">http://www.statcan.ca/english/CANSIM</a> or contact Statistics Canada's national inquiries line listed on the inside front cover of this publication.

#### CD-ROM

A wide variety of data (including those contained in this publication) are available on the *Labour Force Historical Review on CD-ROM* (71F0004XCB). This CD-ROM retails for only \$195.00. To order, CALL 1 800 267-6677, FAX 1 877 287-4369 or MAIL your order to Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, Canada, K1A 0T6. You may also order by E-MAIL at: <a href="mailto:order@statcan.ca">order@statcan.ca</a> or contact your nearest Statistics Canada Regional Reference Centre: 1 800 263-1136.

#### Unpublished data

Additional data are also available on request from the Labour Statistics Division, on a cost recovery basis. Contact Marc Lévesque for requests or for further information at (613) 951-2793.

# CETTE PUBLICATION A ÉTÉ PRÉPARÉ SOUS LA DIRECTION DE :

Mike Sheridan, Statisticien en chef adjoint, Statistique sociale des institutions et du travail (613) 951-9480

Deborah Sunter, Directrice, Division de la statistique du travail, (613) 951-4740.

Les chefs d'unité de l'EPA:

- Geoff Bowlby, Analyse (613) 951-3325
- Gerry Giroux, Traitement des données (613) 951-5850
- Royal Généreux, Traitement (613) 951-4725

avec l'aide du personnel du Programme de l'enquête sur la population active.

# AUTRES SOURCES DE DONNÉES DE L'ENQUÊTE SUR LA POPULATION ACTIVE :

#### **CANSIM**

La plupart des données publiées dans *Statistiques chronologiques sur la population active* (n°71-201-XPB au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socioéconomique). Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM peuvent consulter le site internet à : <a href="http://www.statcan.ca/francais/CANSIM">http://www.statcan.ca/francais/CANSIM</a> ou contacter le service national de renseignements dont le numéro de téléphone figurent au verso du couvert de cette publication.

#### CD-ROM

Un grand éventail de données (incluant celles contenues dans cette publication) sont disponibles sur le *CD-ROM de la Revue chronologique de la population active* (71F0004XCB). Ce CD-ROM se vend à seulement 195 \$. Vous pouvez commander le CD-ROM par TÉLÉPHONE au 1 800 267-6677, par TÉLÉCOPIEUR au 1 877 287-4369 ou par la POSTE à Statistique Canada, Division de la diffusion, Gestion de la circulation, 120 avenue Parkdale, Ottawa (Ontario) K1A 0T6, Canada. Vous pouvez aussi commander par COURRIEL à: <a href="mailto:order@statcan.ca">order@statcan.ca</a> ou en communiquant avec le Centre de consultation régional de Statistique Canada le plus proche au 1 800 263-1136.

#### Données non publiées

Des données additionnelles sont également disponibles sur demande par le biais du Programme de l'Enquête sur la population active, selon le principe de recouvrement des coûts. Veuillez communiquer avec Marc Lévesque au (613) 951-2793 pour toute demande ou pour plus de renseignements.

# The labour market: Year-end review

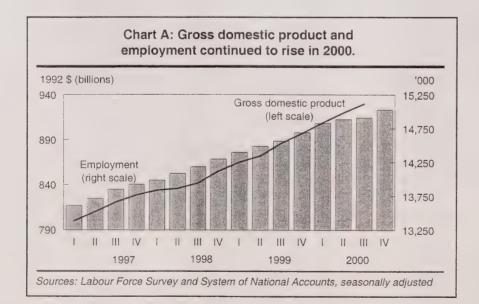

The year 2000 was another good one for the Canadian economy and labour market. Employment continued a four-year climb, while the unemployment rate remained at a low not seen since the 1970s.

While it was a *good* year for job seekers and workers, it was not a *great* year. Entering 2000, a fast-growing economy had delivered 37 consecutive months of employment gains.<sup>1</sup> The year started with a bang and employment growth continued to move forward in the first quarter.

However, even though gross domestic product (GDP) growth continued to be strong, signs that the economy was slowing began to appear in the second quarter (Statistics Canada, 2000), which eventually affected the labour market. Employment plateaued over the summer, the first time this had happened since 1996 (Chart A).

With some indications of a slowdown in the U.S. market, exports to that country slipped slightly in the third quarter, ending 14 consecutive quarterly gains. Still, domestic demand remained strong, and in the second half of the year the labour market rebounded from its summertime plateau with strong job gains.

By the end of the year, employment was up more than 319,000, a healthy increase of 2%, though less than the over 400,000 (3%) average of the previous three years. Even though employment growth slowed in 2000, participation in the labour market continued to climb. As a result, the unemployment rate stayed in the 6.8% range throughout the year, the lowest since the 1970s (Chart B).

# Strength in the labour market shifted to services

In the first nine months of 2000, goods-producing GDP increased by 2.2%, about half the comparable rate in 1999. At the same time, the service sector continued to grow at a pace similar to that of 1999 (Chart C).

Slower economic growth in the goods sector was reflected in the labour market. Indeed, for every additional goods-producing job, 10 service jobs appeared. This came about as manufacturing growth slowed to a more moderate pace than 1999's (Statistics Canada, 2000) and farm employment dropped sharply (Table 1).

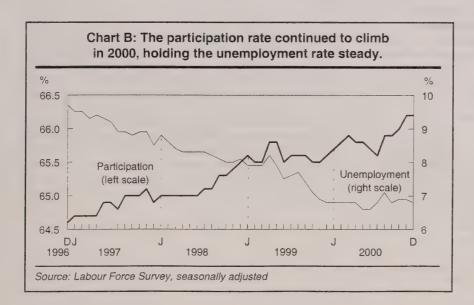

Increased demand for workers in the service sector had the expected effect on the mix of occupations. For example, sales and computer-related jobs were more plentiful in 2000 than in the year before. More jobs in this sector also led to an increase in part-time work, a change from the previous year, when part-time employment actually fell. As well, youths and coreage (25 to 54) women, who are more likely than men to work in the service sector, gained over three-quarters of the jobs.

Employment grew equally in professional, scientific and technical services, and information, culture and recreation. Smaller increases appeared in health care and social assistance, and management, administrative and other support services. The largest increase, however, occurred in the industry that employs the most: retail and wholesale trade.

D	ecember 2000		Change from December 1999	
	'000	'000	%

# Added work in "high-tech" services

Growth in professional, scientific and technical services was driven by computer design services—an industry providing a wide range of computer-related services, including programming, Internet page design and computer systems

analysis, design and integration. At the end of 2000, one-quarter million people worked in the computer systems design industry (up 20,000 or 9% from 1999). Only 6% did so on a parttime basis. Employment in this industry has tripled since early 1994, when the strong upward trend began.

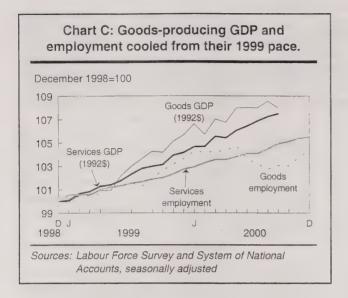

Undoubtedly, such growth led to strong demand for programmers, systems analysts and computer engineers. Collectively, employment in these three occupations jumped 20,000 (6%) to 355,000 (Chart D).

# Information, culture and recreation also up

Strong demand for highly trained computer professionals is one indicator of the so-called "knowledge" economy. So too is the growth in information, culture and recreation (64,000 or 10%), an industry related to the use of the Internet and other information media.

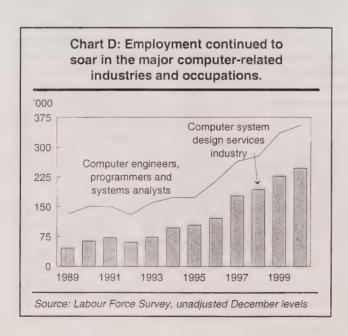

Growth in this industry was spurred by added jobs in a few key areas. Broadcasting and telecommunications employment increased 22,000 (11%), while jobs in publishing rose by 19,000 (24%) in 2000. Finally, employment in information services and data processing services was up 10,000 (24%). This industry includes news syndicates, libraries and companies that provide Internet access services.

Over the last half of the 1990s, employment in amusement, gambling and recreation establishments grew strongly, a trend that continued in 2000 with an increase of 21,000 jobs (15%). While added casino employment made up about 40% of this increase, recreational facilities such as golf courses, ski hills and fitness centres accounted for another half. At close to 160,000, the number of amusement, gambling and recreation workers was more than double that at the start of the 1990s (Chart E).<sup>2</sup>

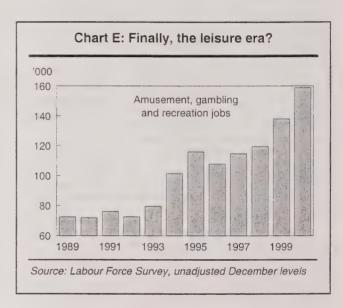

# Rising employment services and business support services

Behind discussion of the "new economy" is the notion that competitive and technological pressures have radically altered the economy and the labour market (Picot and Heisz, 2000). One of the expected outcomes of increased competition is a greater reliance on contracting-out. There is some evidence that firms are increasingly buying services once provided in-house. Over the last

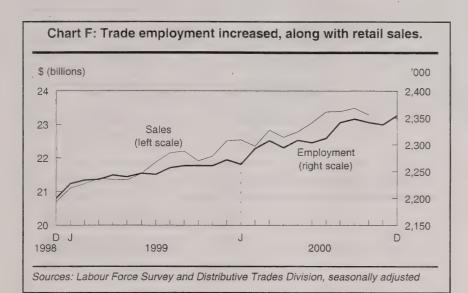

decade, employment in companies providing employment services (employment placement agencies, temporary help services and employee leasing services) has increased markedly. Growth in this industry, part of management, administrative and other support services, indicates that companies may increasingly be relying on other firms to help them with their human resource services needs. In 2000, an additional 17,000 people (25%) worked in employment services. By the end of the year, some 85,000 workers were in this industry, more than double the level of 1994.

Growth in another part of management, administrative and other support services—business support services—has also been linked to contracting-out. People employed in this industry are engaged primarily in activities such as desktop publishing, word processing, telephone answering and voice mail services, telemarketing services and photocopying services. In 2000, employment in business support services rose 36,000. Like employment services, employment in this industry has doubled in the last six years, hitting 88,000 by the end of 2000.

#### More work in retail and wholesale trade

The industry employing the most people in Canada is retail and wholesale trade. Following a slow start in 2000, retail sales accelerated in the middle of the year and by October, were 3.4% higher than at the start of the year. While the relationship between trade sales and employment is not always direct, improved sales at retail outlets may have led to greater demand for workers in this industry. In 2000, trade employment rose 3.6% (83,000), reaching a level of over 2.3 million (Chart F).

# Manufacturing slowed, agriculture dropped

Following strong growth of almost 6% in 1999, manufacturing employment slowed to a more moderate pace in 2000. Declining over the summer, it picked up strongly in the last 3 months, ending the year up 60,000 (3%). This represents a slowdown from the previous year but is still above the all-industry average. While still growing strongly, manufacturing shipments also slowed in the first 10 months of 2000. From January to October, they increased 5%, compared with 6% over the same period in 1999.

As manufacturing employment growth levelled off, the drop in farm employment accelerated (Chart G). Following a decline of 25,000 (6%) in 1999, the number of workers who counted agriculture as their main job fell another 52,000 (13%) in 2000, probably owing to a combination of factors. Continued labour market strength may have drawn some people, including farm spouses and children, off the farms and into better-paying jobs. Others may have been "pushed"

as they faced financial problems caused by relatively low commodity prices, rising fuel and other farm input costs. Third, the typical agricultural worker is older than average, which suggests that the drop in farm employment may also reflect retirement.

# In contrast to 1999, part-time work increased

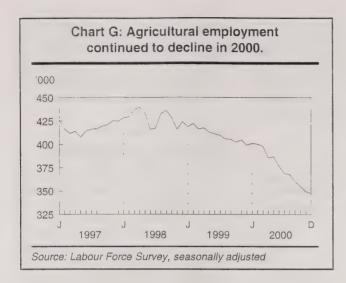

In a year of services employment growth, some increase in part-time work is to be expected. Indeed, of the 319,000 increase in employment in 2000, some 263,000 jobs were full-time while the remaining 56,000 were part-time. This equates to growth rates of 2.2% and 2.1%, respectively. In 1999, part-time employment had actually fallen (Chart H).

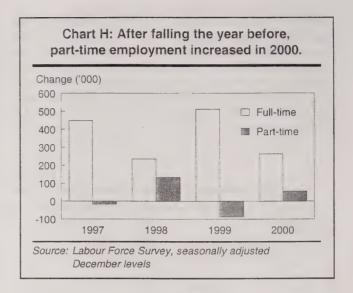

After climbing in the first four years of the 1990s, the proportion of the employed working part time plateaued at around 19% for the next five. In the last two years, it was in the 18% range.

# Sales and service occupations picked up

While employment by industry and job status tells a lot about the nature of employment growth, changes by occupation reveal more about the skills employers are demanding.<sup>3</sup>

With employment up in the service sector, it is no surprise that it also rose in sales and service occupations. Over the year, some 124,000 (3%) sales and service workers were added, driven by hiring at retail and wholesale outlets. But, while the number of these workers in trade rose in 2000, there were fewer retail and wholesale store managers.

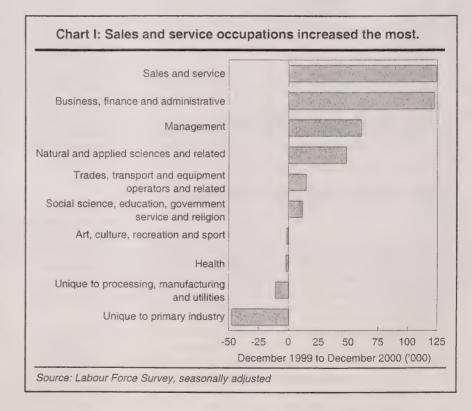

Among the major occupational groups, the next largest increase was in business. finance and administrative jobs. This set of occupations consists largely of clerical and secretarial workers. Most of the 122,000 (5%) increase occurred in two industries: professional, scientific and technical services (which includes the computer services industry mentioned earlier) and management, administrative and other support services.

The number of managers increased in several industries, most notably, in finance, insurance and real estate and in manufacturing. By the end of the year, they had grown by 61,000 (4%) (Chart I).

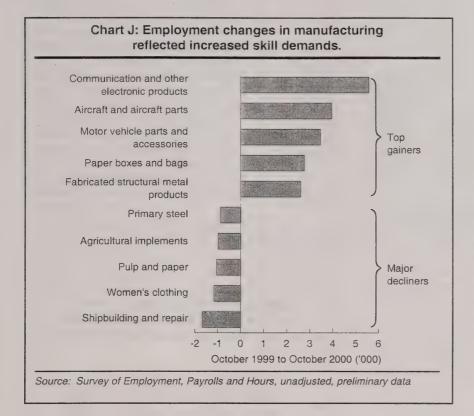

Also rising strongly was employment in natural and applied sciences, up 48,000 (5%). This occupation includes computer programmers, systems analysts and engineers. Not surprisingly, the number of natural and applied science workers in professional, scientific and technical services increased (most likely in the computer design services component). Manufacturing also increasingly employed natural science workers.

In 2000, the general skill level of manufacturing workers appears to have shifted upward, as fewer were employed in blue-collar processing occupations and more worked as managers, natural and applied science, and trades workers. Some of the explanation may lie in the changing nature of what is being manufactured in Canada. According to the Survey of Employment, Payrolls and Hours (which can provide more accurate detailed industry breakouts than the Labour Force Survey), the shift has been away from clothing and pulp and paper

production and toward more technical communications equipment, aircraft and motor vehicle parts (Chart J).

At the other end of the scale were employment losses in occupations unique to primary industry. Employment in this group fell by 47,000 (8%), not entirely unexpected given the decline in agricultural employment.

#### More workers at all skill levels

The issue of skills has probably always been an important aspect of the labour market. However, in recent years it has come to the forefront as the increased pace of technological change, heightened competitiveness and globalization, along with other factors, have changed the type and quality of skills demanded (and supplied) in the workforce.

In order to assess and track changes in the skill level of the workforce, a simple, coherent system is required. Using a method developed at Human Resources Development Canada, it is possible to assign a skill level to each occupation.<sup>4</sup> This system divides workers into four groups, ranked from highest

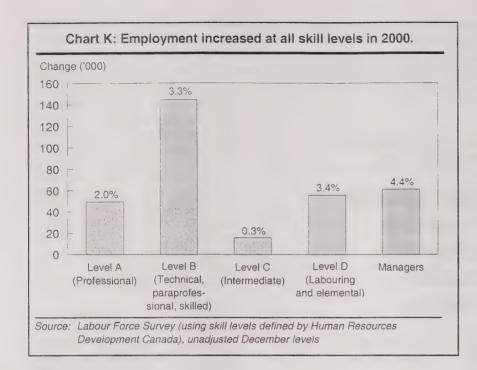

to lowest (A to D) in a skill hierarchy, and places managers in a separate group.

In 2000, employment increased more at each end of the spectrum. Occupations requiring technical or paraprofessional skills (level B) increased the most, jumping 145,000 (3%). Among the most highly skilled (level A), employment increased 49,000 (2%). At the other end, workers in labouring or elemental jobs (level D) increased by 56,000 (3%). The number working in jobs requiring intermediate skill levels (level C) increased only slightly (Chart K).

# First drop in self-employment since 1986

Class of worker (self-employed, public or private sector employee) is another category useful in assessing the nature of work. The year 2000 was the first since 1986 that self-employment declined. The drop was significant, as 146,000 fewer people worked for themselves by the end of the year, a decline of 6% (Chart L). About one-third of this can be attributed to reduced farm employment. The number of self-employed farmers declined by 50,000.

Self-employment also fell strongly in "other services," an industry made up of workers from a wide range of activities, including babysitting, which was second to farming among declines. Why did self-employment in other services drop? With employment rising in better-paying entry level jobs in such areas as retail trade, fewer teenagers may have been available to babysit. Or they may have been doing this only as a second job.<sup>5</sup>

social service agencies. While some growth occurred in social service employment, the bulk of the increase occurred in hospitals, especially among professional and nursing staff (Chart N).

#### Who found work?

The type of employment growth often determines who is hired. In 2000, growth in the service sector would certainly appear to have led to more work for youths and core-age women (Chart O), who are more likely than men to work in service jobs. Over the year, employment among women of core working age increased by 115,000 (2%). This exceeded their population growth, pushing their employment rate up 0.9 percentage points over the year to 74.4%.

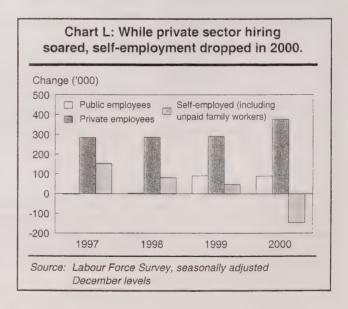

# Strong private sector hiring

In contrast to self-employment, the increase in the number of private sector employees was unusually strong in 2000, jumping 376,000 (4%). After the recession of the early 1990s, hiring in the private sector did not resume in earnest until the latter part of the decade. With the increase in 2000, the proportion of all employed people engaged in paid employment in the private sector finally surpassed its 1989 peak. In November 2000, 65.6% of all employed people worked as private sector employees, the highest rate since at least 1976 (Chart M).

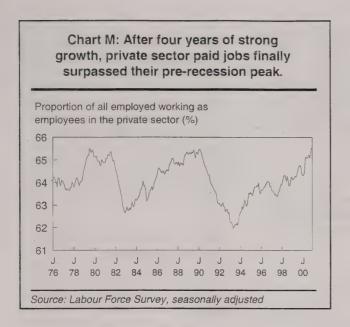

## Workers in health care boosted public sector

For the second consecutive year, more people worked in the public sector, which rose by 89,000. With declines in both public administration and education employment in 2000, health care and social assistance provided most of the increase.

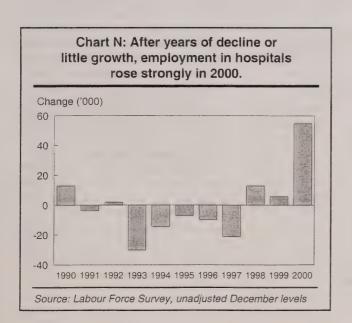

The largest component of health care and social assistance is employment in hospitals, although the industry also includes doctors' offices, nursing homes and

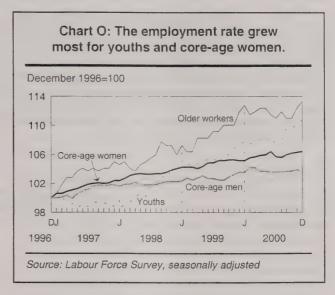

Added hospital and retail trade employment drove the increase in core-age female employment. More women were also employed as sales managers and supervisors, and teachers.

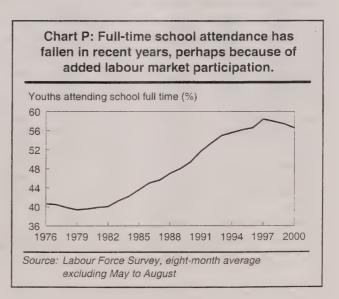

Youths saw the next largest employment gain, with an increase of 90,000 (4%). The bulk of this increase was in retail trade. Their employment rate grew 1.8 percentage points, to 57.4%. Over the last three years, the percentage of youths with a job has increased over 6 points, more than that of any other group. Even with these strong gains, the youth employment rate remains almost 7 percentage points lower than its peak in the late 1980s.

As mentioned earlier, the unemployment rate was close to 6.8% throughout 2000, influenced by rising labour market participation. Much of this additional activity came from youths as school attendance fell. For the first time since 1979, the percentage of young people attending school full time dropped for three consecutive years. In 2000, 56% of youths attended school full time, down a full percentage point from the year before (Chart P).

Following a gain of 134,000 (2%) in 1999, employment growth among core-age men slowed to 58,000 (1%). Smaller employment gains in manufacturing, along with the decline

in agriculture, contributed to the slowdown. The increase was not enough to keep pace with their population growth, leading to a slight drop in their employment rate (at 85.7%, still higher than any other group's).

The 56,000 increase in employment among older people was similar to that for core-age men, although the latter group is much larger. An increase of 4% was concentrated among older women in retail outlets and hospitals. Almost one-quarter of all people 55 or older were working in 2000, a rate last seen at the start of the 1990s.

### Where were the jobs?

Employment rose in almost every province, especially Ontario, the largest. Moreover, although 40% of all employment was in that province, 60% of the increase occurred there. Also gaining disproportionately were Alberta, British Columbia and the three Maritime provinces (Table 2).

#### Ontario continued to steam ahead

While manufacturing employment slowed in the rest of the country, it continued to improve at a strong pace in Ontario, jumping 78,000 (7%). With the increase in manufacturing and gains in parts of the service sector, employment rose by 186,000 over the year, an increase of 3.2%. Over the last four years, employment growth in the province averaged 3.4% per year.

The strong job increase was enough to raise Ontario's employment rate 0.8 percentage points, but a surge in labour force participation actually led to an increase in the unemployment rate. By the end of the year, the unemployment rate in Ontario was 6.0%, half a percentage point higher than at the start of the year.

Table 2: Employment in 2000

	Annual average	fro	nge om 99	December		e from ember 999
	'000	'000	%	'000	'000	%

British Columbia	1,949.1	42.7	2.2	1,972.5	44.3	2.3

Source: Labour Force Survey, seasonally adjusted December levels

The two largest cities in Ontario—Toronto and Ottawa—saw the greatest gains. Compared with the year before, an additional 119,000 people worked in Toronto, an increase of 5%. In Ottawa, 22,000 more people were employed—a growth rate of 4%. The gain in manufacturing contributed strongly to the growth in these two cities, as it did in communities like Windsor, St.Catharines-Niagara, Kitchener-Waterloo and London.

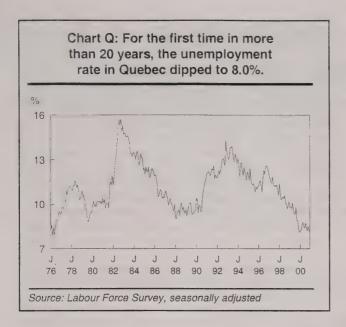

# Slower growth in Quebec but low unemployment

Following three years of gains averaging 3%, employment growth in Quebec slowed in 2000. Compared with the start of the year, 26,000 (1%) more people were employed in December, just enough to keep pace with population growth. Unemployment remained at historically low levels. By the end of the year, the unemployment rate had slipped to 8.0%, for the first time since early 1976 (Chart Q).

# Gains in Vancouver pushed B.C. employment upwards

The next most populous province, British Columbia, saw a 2% increase in employment. By the end of the year, some 44,000 more people were working, pushing the employment rate up 0.6 percentage points to 60.6% and pulling the unemployment rate down to 7.1% from 7.8% at the end of 1999.

The strength of the British Columbia labour market was a reflection of improvements in Vancouver. Increased food and accommodation, and information, culture and recreation work helped lower the unemployment rate to 5.8% by December, less than Toronto's (6.1%) or Montréal's

(7.8%). Throughout the year, the employment rate rose in Vancouver, hitting 62.8% in December, 1.7 percentage points higher than at the start of the year (Chart R).

### Continued growth in Alberta

Of all the provinces, Alberta has had the steadiest and most prolonged increase in employment. The year 2000 marked the eighth consecutive year of growth in excess of 2%. By the end of the year, employment was up 41,000 (3%), owing to increases in accommodation and food, construction and manufacturing. This job growth pushed the unemployment rate to 4.8% by December, 0.6 percentage points lower than a year earlier.

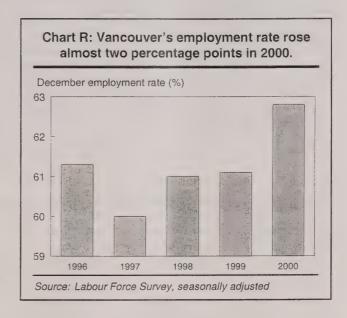

While employment has increased in both Calgary and Edmonton in recent years, it has grown at a faster rate in Calgary. In the mid-1990s, more people worked in Edmonton; by 2000, some 58,000 (11%) more were working in Calgary. In the last six years, its largest gains have been in professional, scientific and technical services and manufacturing.

## Stronger employment rate increase in Manitoba

With gains in manufacturing and information, culture and recreation, employment grew  $10,000\,(2\%)$  in Manitoba in 2000. With working-age population growth of only 0.7% (almost half the national rate), the employment rate ended the year at 64.6%, an increase of 0.7 percentage points. At 4.9% in December, the low unemployment rate in Manitoba was second only to that of Alberta.

## Agriculture led the employment loss in Saskatchewan

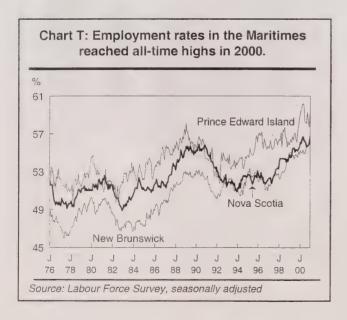

For the second consecutive year, farm employment fell in Saskatchewan (Chart S). In 2000, however, the decline of 13,000 (almost 19%) was much larger. One in 10 employed people in Saskatchewan worked on a farm, more than any other province. Therefore, with the decline in agriculture, it is no surprise that overall employment in the province dipped by 5,000 (1%).

#### Growth continued in the Maritimes

In Nova Scotia, New Brunswick and Prince Edward Island, job growth was above 2.5%. By the end of the year, the proportion of the population with a job was 59.3% in Prince Edward Island, 56.7% in Nova Scotia and 55.9% in New Brunswick. While still low relative to the rest of the country, employment rates in each of these provinces hit all-time highs in 2000 (Chart T).

Newfoundland was the only province in the East where employment fell. Compared with the end of 1999, some 7,000 fewer people were working in Newfoundland, a decline of 3%. The loss in 2000, however, came on the heels of strong growth in the previous three years. Since 1996, when employment began to increase at the national level, employment in Newfoundland has increased by 10.9%, not far behind the 11.5% growth nationally.

#### Notes

- 1 Employment actually fell in January 1998 but this was a non-economic, temporary downturn brought on by the ice storm that hit western Quebec and eastern Ontario.
- 2 A recent study noted that employment in the gambling industry has been increasing for a number of years (Marshall, 2000).
- 3 Longer-term trends could not be compared in this section. Owing to changes in occupation coding, the Labour Force Survey data from June 1999 onward are not comparable with prior data.
- 4 Human Resources Development Canada (HRDC) has assigned a skill level to each detailed occupation within its National Occupational Classification System (NOC). By linking the NOC code with the Standard Occupational Classification code used by Statistics Canada, one can tabulate LFS data according to skill level. For more information on the NOC and HRDC skill levels, see www.hrdc-drhc.gc.ca, then "National Occupational Classification."
- 5 Class of worker refers only to a person's main job.

# Le marché du travail : bilan de fin d'année

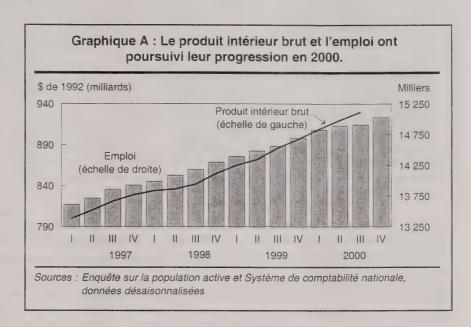

L'économie et le marché du travail au Canada ont connu une autre bonne année en 2000. Pour une quatrième année consécutive, l'emploi a marqué une hausse tandis que le taux de chômage est demeuré à un bas niveau qu'on n'avait pas vu depuis les années 70.

Si 2000 a été une bonne année pour les chercheurs d'emploi et les travailleurs, elle n'a pas été exceptionnelle. Au début de 2000, la croissance rapide de l'économie a permis une hausse de l'emploi pendant 37 mois consécutifs<sup>1</sup>. L'année a débuté avec éclat et la croissance de l'emploi s'est poursuivie au premier trimestre.

Toutefois, même si la forte croissance du produit intérieur brut (PIB) s'est prolongée, l'économie a montré des signes d'essoufflement au deuxième trimestre (Statistique Canada, 2000). Ce ralentissement a eu une incidence sur le marché du travail. L'emploi s'est stabilisé au cours de l'été, pour la première fois depuis 1996 (graphique A).

Alors que le marché américain manifestait certains indices de ralentissement, les exportations vers ce pays ont légèrement reculé au troisième trimestre, mettant fin à 14 augmentations trimestrielles consécutives. Néanmoins, la demande intérieure est demeurée forte et, durant la deuxième moitié de l'année, le marché du travail, qui avait connu une stabilité à l'été, a bondi avec de fortes hausses de l'emploi.

À la fin de l'année, plus de 319 000 emplois avaient été créés. Cette vigoureuse progression de 2 % a toutefois été moins importante que celle

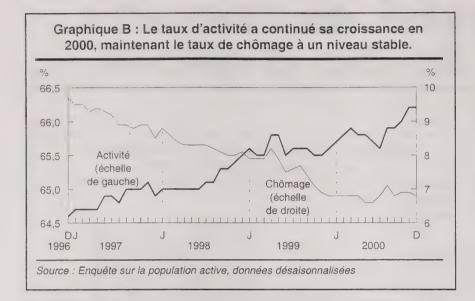

des trois dernières années lorsque, en moyenne, plus de 400 000 emplois (3 %) étaient créés. Même si la croissance de l'emploi a ralenti en 2000, l'activité sur le marché du travail a continué d'augmenter. Par conséquent, le taux de chômage s'est maintenu à environ 6,8 % tout au long de l'année, le taux le plus bas depuis les années 70 (graphique B).

## La force du marché du travail s'est dirigée vers le secteur des services

Pendant les neuf premiers mois de 2000, le PIB de la production des biens a augmenté de 2,2 %, environ la moitié du taux correspondant en 1999. En même temps, le secteur des services a continué de croître à un rythme semblable à celui de 1999 (graphique C).

Une croissance économique plus lente dans le secteur des biens s'est reflétée dans le marché du travail. Pour chaque emploi supplémentaire dans le secteur de la production des biens, on comptait 10 emplois de plus du côté du secteur des services. Cela est survenu alors que la croissance dans le secteur de la fabrication ralentissait à un rythme plus modéré qu'en 1999 (Statistique Canada, 2000) et que l'emploi agricole chutait brusquement (tableau 1).

Une demande additionnelle pour des travailleurs du secteur des services a eu l'effet attendu sur la répartition des emplois. Par exemple, il y avait beaucoup plus d'emplois reliés à la vente et à l'informatique en 2000 que l'année précédente. Plus d'emplois dans le secteur des services a également entraîné une

## L'emploi a augmenté au chapitre des services liés à la «haute technologie»

La croissance dans les services professionnels, scientifiques et techniques a été menée par les services de conception informatique—un secteur fournissant un large éventail de services informatiques, y compris la programmation, la conception de pages Internet et l'intégration, la conception et l'analyse de systèmes informatiques. À la fin de 2000, un quart de million de personnes travaillaient dans le secteur de la conception de systèmes informatiques (en hausse de 20 000 ou de 9 % par rapport à 1999).

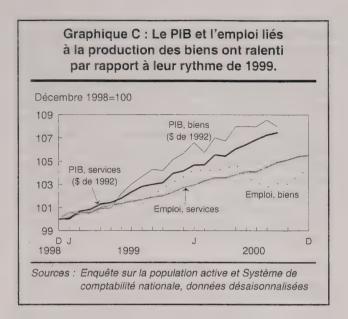

recrudescence du travail à temps partiel, un changement par rapport à il y a un an alors que le nombre d'emplois à temps partiel avait chuté. Aussi, les jeunes et les femmes du principal groupe d'âge actif (25 à 54 ans), qui sont plus susceptibles de travailler dans ce secteur que les hommes, sont ceux qui ont obtenu plus des trois quarts des emplois.

L'emploi a augmenté de façon similaire dans les services professionnels, scientifiques et techniques et dans le domaine de l'information, de la culture et des loisirs. Il y a eu un accroissement moindre dans la branche d'activité relative aux soins de santé et à l'assistance sociale ainsi que dans celle de la gestion, des services administratifs et autres services de soutien. Toutefois, la plus forte croissance est survenue dans le secteur qui emploie plus que tout autre : le commerce de détail et de gros.

Source : Enquête sur la population active, données désaisonnalisées

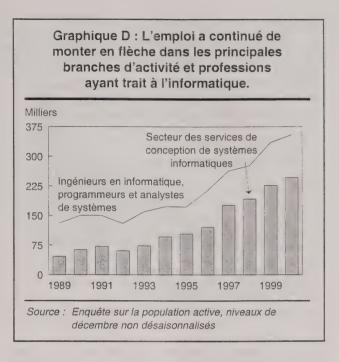

Seulement 6 % d'entre elles occupaient un poste à temps partiel. L'emploi dans cette branche d'activité a triplé depuis le début de 1994, année marquant le commencement d'une vigoureuse tendance à la hausse.

Cette croissance a indubitablement créé une forte demande pour les programmeurs, les analystes de systèmes et les ingénieurs en informatique. En tout, il y a eu une augmentation de 20 000 emplois (6 %) dans ces trois professions, le nombre global s'élevant à 355 000 (graphique D).

## Les secteurs de l'information, de la culture et des loisirs ont aussi progressé

La forte demande pour les professionnels en informatique hautement qualifiés est un indice d'une économie dite du «savoir». Il en va de même quant à la croissance touchant le secteur de l'information, de la culture et des loisirs (64 000 emplois de plus, soit une hausse de 10 %), une branche d'activité reliée à Internet et à d'autres moyens d'information.

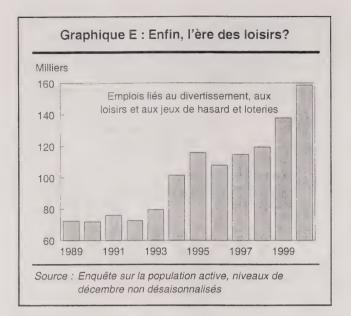

La croissance dans ce secteur a été menée par une recrudescence des emplois dans certains domaines clés. D'abord, 22 000 emplois (11 %) ont été créés dans le secteur de la diffusion et des télécommunications, tandis que 19 000 (24 %) l'ont été dans celui de l'édition en 2000. Enfin, 10 000 emplois (24 %) ont été créés dans les services d'information et de traitement des données. Ce secteur comprend les groupes de presse, les bibliothèques et les entreprises de services d'accès à Internet.

Au cours de la dernière moitié des années 90, l'emploi dans le secteur du divertissement, des loisirs et des jeux de hasard et loteries a enregistré une croissance vigoureuse. Cette tendance s'est poursuivie en 2000, le nombre d'emplois augmentant de 21 000 (15 %). Alors que la hausse de l'emploi dans les casinos représentait environ 40 % de cette augmentation, l'autre moitié des gains a été observée dans les installations destinées aux loisirs telles que les terrains de golf, les centres de ski et les centres de conditionnement physique. Approchant les 160 000 personnes, le nombre de travailleurs dans le domaine du divertissement, des loisirs et des jeux de hasard et loteries a plus que doublé depuis le début des années 90 (graphique E)<sup>2</sup>.

# Accroissement des services d'emploi et de soutien aux entreprises

Des discussions au sujet de la «nouvelle économie» laissent entendre que les pressions exercées par la concurrence et la technologie ont radicalement modifié l'économie et le marché du travail (Picot et Heisz, 2000). Une des conséquences anticipées découlant de la concurrence grandissante est l'appel accru à la sous-traitance. Il semble que, de plus en plus, les entreprises achètent des services qui étaient auparavant assurés à l'interne. Au cours de la dernière décennie, les entreprises offrant des

services d'emploi (agences de placement, services de travail temporaire et sociétés de mise à disposition de personnel) se sont multipliées. La croissance dans cette branche d'activité, qui fait partie de la catégorie de la gestion, des services administratifs et autres services de soutien, montre que les entreprises font peut-être de plus en plus appel à d'autres firmes pour les aider à combler leurs besoins en services de ressources humaines. En 2000, 17 000 personnes de plus (25 %) travaillaient dans les services d'emploi. À la fin de l'année, ce secteur comptait quelque 85 000 travailleurs, soit plus que le double du niveau enregistré en 1994.

La croissance dans un autre domaine faisant également partie de la catégorie de la gestion, des services administratifs et autres services de soutien—les services de soutien aux entreprises—a également été reliée à la sous-traitance. Les travailleurs de ce secteur sont surtout engagés dans des activités comme l'éditique, le traitement de texte, les services de réponse téléphonique et de messagerie vocale, le télémarketing et les services de photocopie. En 2000, l'emploi dans les services de soutien aux entreprises a augmenté de 36 000 travailleurs. Tout comme pour les services d'emploi, le nombre d'emplois dans ce secteur a doublé au cours des six dernières années, atteignant 88 000 à la fin de 2000.

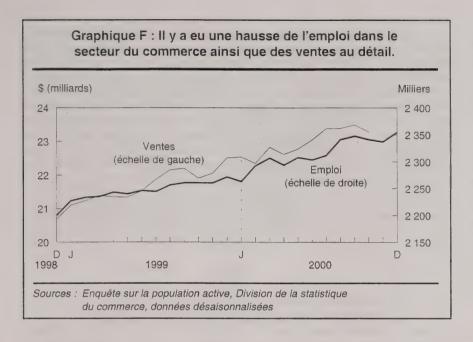

## Augmentation du nombre d'emplois dans le commerce de détail et de gros

Le secteur qui embauche le plus grand nombre de travailleurs au Canada est le commerce de détail et de gros. Au début de 2000, les ventes au détail ont été plutôt faibles, mais elles se sont accélérées vers le milieu de l'année et, en octobre, elles étaient en hausse de 3,4 % par rapport au début de l'année. Bien qu'il n'y ait pas toujours de lien direct entre les ventes et l'emploi, l'accroissement des ventes réalisées aux points de vente au détail a pu entraîné une demande accrue pour des travailleurs dans ce secteur. En 2000, l'augmentation de l'emploi dans le secteur du commerce était de 3,6 % (83 000), se chiffrant à plus de 2,3 millions de travailleurs (graphique F).

## La fabrication a ralenti et l'emploi agricole a chuté

Suivant une croissance considérable de près de 6 % en 1999, l'emploi dans le secteur de la fabrication a ralenti pour atteindre un rythme plus modéré en 2000. Bien qu'il ait diminué au cours de l'été, il s'est vigoureusement redressé durant les 3 derniers mois, terminant l'année en hausse de 60 000 travailleurs (3 %). Il s'agit d'un repli comparativement à l'année précédente, mais également d'une croissance qui demeure supérieure à la moyenne de l'ensemble des secteurs. Malgré une hausse considérable, les livraisons manufacturières ont aussi fléchi durant les 10 premiers mois de 2000. De janvier à octobre, elles ont augmenté de 5 %, comparativement à 6 % au cours de la même période en 1999.

À mesure que se stabilisait la croissance de l'emploi dans le secteur de la fabrication, la chute de l'emploi agricole s'accélérait (graphique G). Suivant une diminution de 25 000 travailleurs (6 %) en 1999, le nombre de travailleurs dont l'emploi principal était en agriculture a accusé un nouveau repli de 52 000 (13 %) en 2000, probablement à cause d'une combinaison de facteurs. La robustesse du marché du travail peut avoir incité certains travailleurs, incluant les conjoints et les enfants vivant dans une ferme, à quitter l'exploitation agricole et à occuper un emploi mieux rémunéré. D'autres encore ont pu quitter en raison de difficultés financières découlant du prix relativement bas des produits ou encore de la hausse du coût du carburant et d'autres intrants agricoles. Troisièmement, le travailleur agricole type est plus âgé que la moyenne, ce qui suppose que la chute de l'emploi agricole peut aussi être attribuable à la retraite.

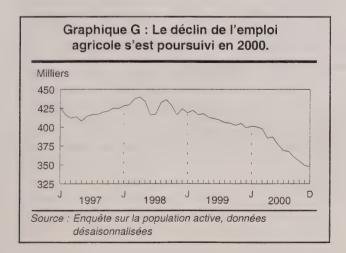

Après avoir progressé durant les quatre premières années de la décennie, la proportion des travailleurs à temps partiel s'est stabilisée à environ 19 % pendant les cinq années suivantes. Au cours des deux dernières années, ce taux se situait à environ 18 %.

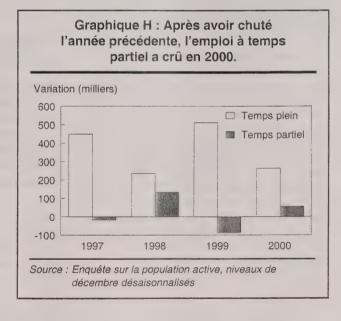

## Les professions liées aux ventes et aux services ont augmenté

Bien qu'il soit possible de déterminer la nature de la croissance de l'emploi en tenant compte de l'emploi selon le secteur et le régime de travail, les changements selon le type de profession sont plus révélateurs des compétences que recherchent les employeurs<sup>3</sup>.

# Contrairement à l'année 1999, l'emploi à temps partiel a crû

Au cours d'une année pendant laquelle les services ont connu une croissance de l'emploi, il fallait s'attendre à une certaine augmentation du travail à temps partiel. En fait, de la hausse des 319 000 emplois en 2000, quelque 263 000 étaient des emplois à temps plein alors que les 56 000 autres étaient à temps partiel. Cela s'est traduit par des taux de croissance de 2,2 % et de 2,1 %, respectivement. En 1999, l'emploi à temps partiel avait chuté (graphique H).

Comme l'emploi dans le secteur des services est en hausse, il n'est pas surprenant qu'il le soit aussi en ce qui concerne les professions liées aux ventes et aux services. Au cours de l'année, le secteur des ventes et des services comptait quelque 124 000 travailleurs de plus (3 %), une majoration attribuable aux nouveaux employés embauchés aux points de vente au détail et de gros. Bien que le nombre de ces travailleurs ait augmenté en 2000, il y avait moins de gérants de magasins de détail et de gros.

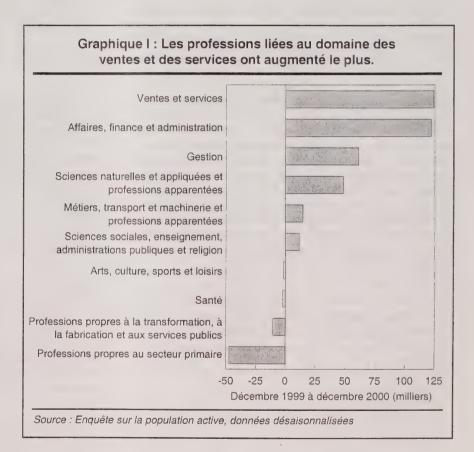

La deuxième hausse en importance parmi les principaux groupes de professions s'est réalisée dans les emplois avant trait aux affaires, à la finance et à l'administration. Ces professions sont surtout exercées par des commis et des secrétaires. L'accroissement du nombre de travailleurs dans ces professions, c.-à-d. 122 000 personnes de plus (5 %), s'est surtout réalisé dans deux secteurs : les services professionnels, scientifiques et techniques (qui incluent la branche d'activité des services informatiques susmentionnée) et la gestion, les services administratifs et autres services de soutien.

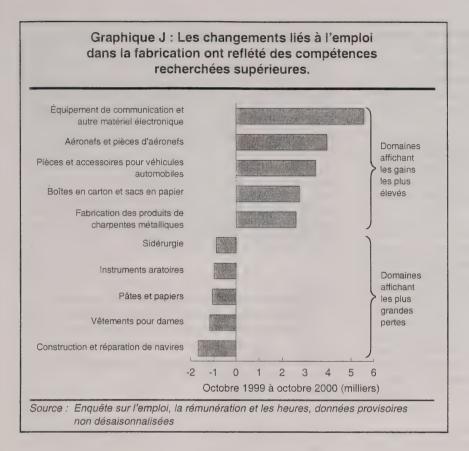

Le nombre de gestionnaires a augmenté dans plusieurs secteurs, principalement dans la finance, les assurances, l'immobilier ainsi que dans la fabrication. À la fin de l'année, il y avait 61 000 gestionnaires de plus (4%) (graphique I).

L'emploi dans les sciences naturelles et appliquées a également connu une augmentation considérable, en hausse de 48 000 (5 %). Ce groupe professionnel comprend les programmeurs, les analystes de systèmes et les ingénieurs. Il n'est pas surprenant qu'il y ait eu une progression du nombre de travailleurs des sciences naturelles et appliquées dans les services professionnels, scientifiques et techniques (surtout dans la composante des services de conception informatique). Un autre secteur où on retrouvait de plus en plus de travailleurs des sciences naturelles était celui de la fabrication.

En 2000, il semble qu'il y ait eu une hausse du niveau général des compétences des travailleurs manufacturiers, puisqu'il y a eu une diminution du nombre de cols bleus occupant des postes de transformation et une augmentation du nombre de gestionnaires, de travailleurs des sciences naturelles et appliquées et de ceux dans le secteur des métiers. Cela peut être en partie attribuable à la nature changeante des produits fabriqués au Canada. Selon l'Enquête sur l'emploi, la rémunération et les heures (qui peut fournir une répartition détaillée plus exacte du secteur que l'Enquête sur la population active), il y a eu un recul de la production de vêtements et de la production de pâtes et papiers et une montée de la production plus technique se rapportant à l'équipement de communication ainsi qu'aux pièces d'aéronefs et de véhicules automobiles (graphique J).

À l'autre extrémité de l'échelle, il y a eu des pertes d'emploi dans les professions propres au secteur primaire. L'emploi dans ce groupe a chuté de 47 000 (8 %), une diminution peu surprenante étant donné la baisse relative à l'emploi agricole.

Développement des ressources humaines Canada, il est possible d'assigner un niveau de compétence à chaque profession<sup>4</sup>. Ce système divise les travailleurs en quatre groupes, ordonnés du plus haut niveau de compétence au plus bas (de A à D). Les gestionnaires, pour leur part, sont traités séparément.

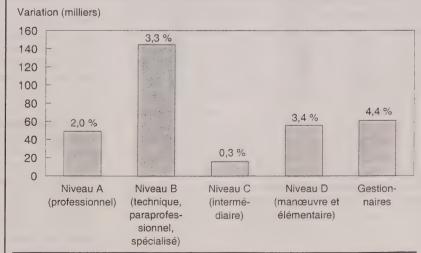

En 2000, l'emploi a davantage augmenté à chaque extrémité du spectre. Les professions nécessitant des compétences techniques ou paraprofessionnelles (niveau B) ont augmenté le plus, bondissant de 145 000 (3 %). Parmi les plus qualifiés (niveau A), l'emploi a crû de 49 000 (2 %). À l'autre extrémité, il y a eu une hausse de 56 000 travailleurs (3 %) occupant des postes élémentaires ou de manœuvre (niveau D). Le nombre de personnes occupant des emplois exigeant un niveau de compétence intermédiaire (niveau C) n'a que très peu augmenté (graphique K).

## Hausse des travailleurs de tous les niveaux de compétence

L'enjeu des compétences a probablement toujours été un aspect important du marché du travail. Toutefois, au cours des dernières années, cela est devenu une préoccupation de premier plan puisque le rythme accru des changements technologiques, la concurrence grandissante et la globalisation, de même que d'autres facteurs, ont changé le type et la qualité des compétences recherchées (et offertes) dans la main-d'œuvre.

Afin d'évaluer et d'identifier les changements concernant le niveau de qualification de la main-d'œuvre, un système simple et cohérent est requis. En utilisant la méthode élaborée par

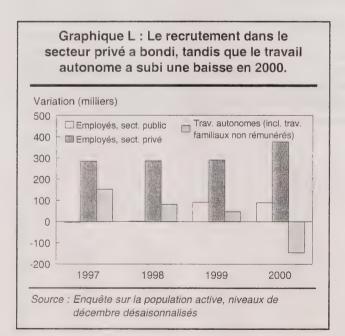

Source : Enquête sur la population active (selon les niveaux de qualification définis par Développement des ressources humaines Canada), niveaux de décembre non désaisonnalisés

## Première baisse en ce qui concerne le travail autonome depuis 1986

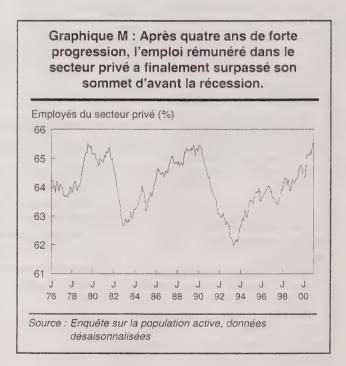

La catégorie de travailleurs (travailleurs autonomes, employés du secteur public ou privé) constitue une autre catégorie utile à l'évaluation de la nature du travail. En 2000, le travail autonome a reculé pour la première fois depuis 1986. Il s'agit là d'un repli considérable, le nombre de travailleurs autonomes ayant diminué de 146 000 à la fin de l'année, en baisse de 6 % (graphique L). Environ le tiers de ce déclin peut être attribuable à la baisse de l'emploi agricole. Le nombre d'agriculteurs travaillant à leur compte a chuté de 50 000.

Le nombre de travailleurs autonomes a aussi fortement baissé dans les «autres services», un secteur qui regroupe des travailleurs se livrant à une vaste gamme d'activités, dont, entre autres, la garde d'enfants (qui a connu la deuxième plus importante perte, après le travail agricole). Qu'est-ce qui explique le recul du travail autonome dans les autres services? La croissance des emplois mieux rémunérés au moment du recrutement dans des secteurs comme le commerce de détail tendait à restreindre le nombre de jeunes intéressés par la garde d'enfants. Ou peutêtre le faisaient-ils seulement dans le cadre d'un emploi secondaire<sup>5</sup>.

# Forte hausse du recrutement dans le secteur privé

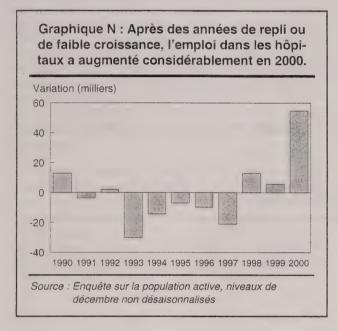

Contrairement au travail autonome, le secteur privé a affiché une hausse exceptionnellement forte du nombre d'emplois en 2000, faisant un bond de 376 000 (4 %). Après la récession du début des années 90, le recrutement dans le secteur privé n'a amorcé une reprise sensible qu'au cours de la dernière partie de la décennie. Grâce à la croissance survenue en 2000, la proportion que représentent les employés du secteur privé dans l'ensemble des salariés a finalement dépassé le sommet enregistré en 1989. En novembre 2000, 65,6 % de l'ensemble des employés travaillaient dans le secteur privé, soit le taux le plus élevé depuis au moins 1976 (graphique M).

# Les travailleurs de la santé ont renforcé le secteur public

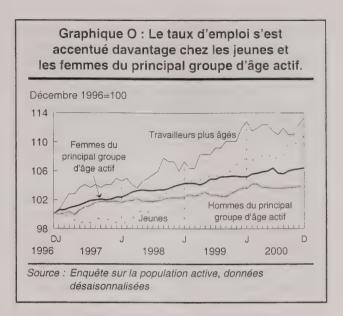

On observe, pour une deuxième année d'affilée, une augmentation du nombre de personnes travaillant dans le secteur public. L'emploi dans ce secteur a progressé de 89 000. Compte tenu des reculs accusés dans les secteurs de l'administration publique et de l'éducation en 2000, cette croissance est surtout attribuable aux soins de santé et à l'assistance sociale.

L'effectif des hôpitaux représente la principale composante de l'emploi dans les soins de santé et l'assistance sociale, bien que cette branche d'activité regroupe également les personnes travaillant dans les cabinets de médecins, les maisons de convalescence et les organismes de services sociaux. Si l'emploi dans les services sociaux a légèrement augmenté, la très grande partie de la croissance s'est produite dans les hôpitaux, particulièrement chez les effectifs professionnels et infirmiers (graphique N).

#### Oui a trouvé du travail?

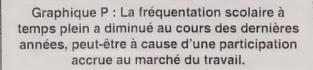

La nature de la croissance de l'emploi détermine souvent qui en tire parti. En 2000, l'expansion du secteur des services semble manifestement avoir entraîné une progression de l'emploi chez les jeunes et les femmes du principal groupe d'âge actif, plus susceptibles que les hommes à occuper des postes dans ce secteur. Au cours de l'année, le nombre d'emplois chez les femmes du principal groupe d'âge actif s'est accru de 115 000 (2 %). Cette hausse est supérieure à la croissance démographique de ce groupe, de sorte que le taux d'emploi a grimpé de 0,9 point de pourcentage pendant l'année pour atteindre 74,4 % (graphique O).

L'expansion de l'emploi dans les hôpitaux et dans le commerce de détail s'est imposée comme le moteur de la hausse de l'emploi chez les femmes du principal groupe d'âge actif. Le nombre de femmes occupant des postes de directrices ou de chefs des ventes et d'enseignantes s'est aussi accru.

Les jeunes se classaient au deuxième rang pour ce qui est de la croissance de l'emploi, enregistrant une hausse de 90 000 (4 %). Cette augmentation est principalement attribuable au commerce de détail. Leur taux d'emploi est monté de 1,8 point de pourcentage pour atteindre 57,4 %. Au cours des trois dernières années, le pourcentage de jeunes occupant un emploi a augmenté de plus de 6 points, soit la plus forte hausse observée parmi tous les groupes de travailleurs. Malgré ces gains considérables, le taux d'emploi des jeunes demeure inférieur à son sommet atteint à la fin des années 80 : un écart de presque 7 points de pourcentage les sépare.

Comme on l'a mentionné plus tôt, le taux de chômage s'est établi à près de 6,8 % tout au long de 2000, influencé par la hausse de la participation au marché du travail. L'augmentation de cette participation s'est principalement appuyée sur les jeunes, alors qu'on assistait à une baisse de la fréquentation scolaire. Pour la première fois depuis 1979, le pourcentage de jeunes poursuivant des études à temps plein a diminué pendant trois années consécutives. En 2000, 56 % des jeunes fréquentaient l'école à temps plein, en baisse d'un point de pourcentage par rapport à l'année précédente (graphique P).

Source : Enquête sur la population active, moyenne de huit mois excluant les mois de mai à août

### Où la croissance de l'emploi se manifestaitelle?

L'emploi a progressé dans presque toutes les provinces, particulièrement en Ontario, la plus importante d'entre elles. De plus, même si elle comptait 40 % de l'ensemble des emplois, l'Ontario a enregistré 60 % de la croissance. L'Alberta, la Colombie-Britannique et les trois provinces des Maritimes comptaient également parmi les provinces ayant obtenu une part des emplois supérieure à leur poids au pays (tableau 2).

## L'Ontario a poursuivi sa montée

Si l'emploi manufacturier a ralenti dans le reste du pays, il a continué de croître à bon rythme en Ontario, grimpant de 78 000 (7 %). Grâce à l'expansion enregistrée dans le secteur de la fabrication et dans certaines branches du secteur des services, le nombre d'emplois a augmenté de

Après un gain de 134 000 (2 %) en 1999, la croissance de l'emploi chez les hommes du principal groupe d'âge actif a ralenti pour se chiffrer à 58 000 (1 %). Une progression moins marquée de l'emploi dans le secteur de la fabrication de même que le fléchissement en agriculture sont à l'origine de ce ralentissement. L'expansion observée n'a pas suffi à suivre le rythme de la croissance démographique de ce groupe, ce qui s'est traduit par une légère baisse du taux d'emploi des hommes de ce groupe d'âge (taux qui, s'établissant à 85,7 %, reste néanmoins supérieur à celui de tout autre groupe).

Les travailleurs plus âgés ont affiché une augmentation du nombre d'emplois (de 56 000) similaire à celle des hommes du principal groupe d'âge actif; toutefois, ce dernier groupe est nettement plus important. Il s'agit là d'une hausse de 4 % qui s'est surtout produite au profit des femmes plus âgées œuvrant dans le commerce de détail et les hôpitaux. Près du quart de l'ensemble de la population âgée de 55 ans ou plus travaillait en 2000, soit un taux sans précédent depuis le début des années 90.

Tableau 2 : Emploi en 2000

Source : Enquête sur la population active, niveaux de décembre désaisonnalisés

186 000 au cours de l'année, en hausse de 3,2 %. Au cours des quatre dernières années, la croissance de l'emploi dans la province s'est établie, en moyenne, à 3,4 % par année.

Cette forte progression de l'emploi a permis de hausser le taux d'emploi de l'Ontario de 0,8 point de pourcentage, mais la poussée de la participation à la population active a, en réalité, fait monter le taux de chômage. À la fin de l'année, le taux de chômage en Ontario s'établissait à 6,0 %, soit un demi-point de pourcentage de plus qu'au début de l'année.

Les deux plus grandes villes ontariennes—Toronto et Ottawa— ont bénéficié des plus fortes augmentations. On comptait 119 000 travailleurs de plus à Toronto par rapport à l'année précédente, en hausse de 5 %. À Ottawa, le nombre d'emplois s'est accru de 22 000—un taux de croissance de 4 %. L'expansion de l'emploi manufacturier a contribué de façon importante à la progression observée dans ces deux villes de même que dans d'autres collectivités comme Windsor, St. Catharines-Niagara, Kitchener-Waterloo et London.

## Croissance ralentie au Québec, mais chômage peu élevé

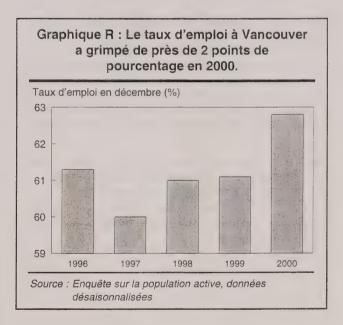

En 2000, la croissance de l'emploi s'est atténuée au Québec, après trois augmentations annuelles s'établissant en moyenne à 3 %. En décembre, le Québec comptait 26 000 emplois de plus (1 %) qu'au début de l'année, soit un taux de croissance semblable à celui de la population. Le taux de chômage est resté à des taux jugés historiquement peu élevés. À la fin de l'année, il a glissé à 8,0 %, une première depuis le début de l'année 1976 (graphique Q).

## Les gains à Vancouver ont stimulé l'emploi en Colombie-Britannique

Troisième province en importance au chapitre de la population, la Colombie-Britannique a affiché une croissance de l'emploi de 2 %. À la fin de l'année, 44 000 personnes de plus y travaillaient; cette hausse a permis au taux d'emploi de monter de 0,6 point de pourcentage pour atteindre 60,6 % et a fait passer le taux de chômage de 7,8 % à la fin de 1999 à 7,1 %.

La vigueur du marché du travail de la Colombie-Britannique était le reflet des améliorations enregistrées à Vancouver. L'expansion de l'emploi dans le secteur de l'hébergement et de la restauration ainsi que dans celui de l'information, de la culture et des loisirs a contribué à faire fléchir le taux de chômage de Vancouver à 5,8 % en décembre; il s'agit là d'un taux inférieur à celui enregistré à Toronto (6,1 %) et à Montréal (7,8 %). Le taux d'emploi a augmenté tout au long de l'année à Vancouver pour s'établir à 62,8 % en décembre, soit 1,7 point de pourcentage au-dessus de celui au début de l'année (graphique R).

#### Croissance soutenue en Alberta

De toutes les provinces, l'Alberta est celle qui a affiché la croissance de l'emploi la plus constante et la plus soutenue. En 2000, l'expansion de l'emploi a été supérieure à 2 % pour une huitième année consécutive. À la fin de l'année, l'Alberta comptait 41 000 emplois de plus (3 %) en raison des gains obtenus dans les secteurs de l'hébergement et de la restauration, de la construction et de la fabrication. Cette augmentation du nombre d'emplois a fait passer le taux de chômage à 4,8 % en décembre, en baisse de 0,6 point de pourcentage par rapport à ce qu'il était un an plus tôt.

Calgary et Edmonton ont, toutes deux, enregistré une croissance de l'emploi au cours des dernières années, mais le nombre d'emplois a progressé plus rapidement à Calgary. Au milieu des années 90, on recensait plus d'emplois à Edmonton; en 2000, on en recensait quelque 58 000 de plus (11 %) à Calgary. Au cours des six dernières années, les hausses les plus fortes dans cette dernière ont été observées dans les services professionnels, scientifiques et techniques ainsi que dans le secteur de la fabrication.

## Taux de croissance de l'emploi supérieur au Manitoba

Grâce aux gains dans les secteurs de la fabrication ainsi que de l'information, de la culture et des loisirs, le nombre d'emplois s'est accru de 10 000 (2 %) au Manitoba en 2000. La croissance de la population d'âge actif n'ayant atteint que 0,7 % (près de la moitié du taux national), le taux d'emploi

Graphique S: Le travail agricole a reculé en Saskatchewan, poussant à la baisse l'emploi global. Décembre 1996=100 110 Emploi global 90 Emploi agricole 80 1996 1998 1999 2000 Source : Enquête sur la population active, données désaisonnalisées

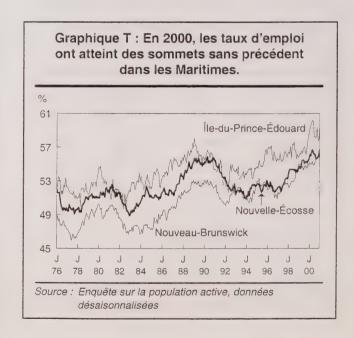

a connu une hausse de 0,7 point de pourcentage pour s'établir à 64,6 % à la fin de l'année. Enregistrant un taux de chômage de 4,9 % en décembre, le Manitoba arrivait en deuxième position derrière l'Alberta pour ce qui est des taux de chômage les plus faibles.

### L'agriculture a provoqué un repli de l'emploi en Saskatchewan

L'emploi agricole s'est replié pour une deuxième année consécutive en Saskatchewan (graphique S). En 2000, cependant, la perte de 13 000 emplois (presque 19 %) était nettement plus marquée. En Saskatchewan, une personne sur 10 travaillait dans une ferme; il s'agit là du taux le plus élevé au pays. Il n'est donc pas surprenant que, compte tenu du fléchissement de l'agriculture, le nombre total d'emplois ait diminué de 5 000 (1 %) dans la province.

## La croissance s'est poursuivie dans les Maritimes

En Nouvelle-Écosse, au Nouveau-Brunswick et à l'Île-du-Prince-Édouard, l'expansion de l'emploi a été supérieure à 2,5 %. À la fin de l'année, la proportion de la population occupant un emploi s'établissait à 59,3 % à l'Île-du-Prince-Édouard, à 56,7 % en Nouvelle-Écosse et à 55,9 % au Nouveau-Brunswick. Bien qu'ils demeurent relativement faibles par rapport à ceux du reste du pays, les taux d'emploi dans chacune de ces provinces ont atteint des sommets sans précédent en 2000 (graphique T).

Terre-Neuve est la seule province de l'Est ayant accusé un recul au chapitre de l'emploi. Par rapport à la fin de 1999, on comptait quelque 7 000 emplois de moins à Terre-Neuve, soit une baisse de 3 %. Les pertes observées en 2000 sont toutefois survenues après la forte croissance enregistrée au cours des trois années précédentes. Depuis 1996, au moment où l'emploi amorçait une reprise à l'échelle nationale, le nombre d'emplois a augmenté de 10,9 % à Terre-Neuve, soit un taux de croissance s'approchant de celui de l'ensemble du pays (11,5 %).

#### Notes

- 1 L'emploi a en fait reculé en janvier 1998; ce repli, temporaire et non économique, est survenu en raison de la tempête de verglas qui a affligé l'ouest du Québec et l'est de l'Ontario.
- 2 Dans une étude récente, on a souligné que l'emploi dans le secteur des jeux de hasard et loteries est en croissacne depuis un certain nombre d'années (Marshall, 2000).
- 3 On n'a pu comparer les tendances à plus long terme dans cette section. En raison de modifications concernant le codage des professions, les données de l'Enquête sur la population active à partir de juin 1999 ne sont pas comparables aux données antérieures.

- Développement des ressources humaines Canada (DRHC) a attribué un niveau de qualification à chaque profession détaillée selon son système de Classification nationale des professions (CNP). En liant le code de la CNP à celui de la Classification type des professions utilisé par Statistique Canada, il est possible de générer des données de l'Enquête sur la population active selon le niveau de compétence. Pour plus d'information sur la CNP et les niveaux de compétence, voir www.hrdc-drhc.gc.ca, puis «Classification nationale des professions».
- 5 La catégorie de travailleurs ne réfère qu'à l'emploi principal d'une personne.

### About the Labour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of 52,000 representative households across the country. The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. It has been carried out monthly since then. The information generated by the survey has expanded considerably over the years with a major redesign of the survey content in 1976 and again in 1997, and provides a rich and detailed picture of the Canadian labour market. Details of these changes are available on request from the Labour Force Survey Program, Statistics Canada, Ottawa, K1A 0T6.

The sample used in the Labour Force Survey has been designed to represent all persons in the population 15 years of age and over residing in the provinces of Canada, with the exception of the following: persons living on Indian reserves, full-time members of the armed forces and people living in institutions (for example, inmates of penal institutions and patients in hospitals or nursing homes who have resided in the institution for more than 6 months). Monthly estimates of employment, unemployment and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

For detailed information on the LFS data collection, methodology and content see the document *Guide to the Labour Force Survey* (Catalogue no. 71-543-GIE) on the Statistics Canada web site at <a href="https://www.statcan.ca/english/concepts/labour/index.htm">www.statcan.ca/english/concepts/labour/index.htm</a>.

### **Definitions and Explanations**

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed persons are those who, during the reference week:

- a) did any work at all
- b) had a job but were not at work

A person is considered to be **full-time** if his/her usual hours at the main job are greater than 29 hours per week. When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be **part-time**.

**Unemployed** persons are those who, during the reference week:

- a) were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work;
- b) had not actively looked for work in the past four weeks but were on temporary layoff and were available for work;
- c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed are classified as **not in the labour force.** 

### À propos de l'Enquête sur la population active

Les statistiques publiées ici sont fondées sur une enquête mensuelle menée auprès d'environ 52 000 ménages représentatifs d'un bout à l'autre du Canada. L'enquête sur la population active, lancée en novembre 1945, a eu lieu tous les trois mois jusqu'à novembre 1952. Depuis lors, elle a lieu tous les mois. L'information générée par l'enquête s'est considérablement accrue au cours des années grâce à un remaniement majeur de l'enquête en 1976, suivi d'un autre en 1997, et fournit une image riche et détaillée du marché du travail canadien. On peut obtenir des détails sur ces changements en s'adressant au Programme de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

L'échantillon retenu aux fins de l'enquête sur la population active représente toutes les personnes de 15 ans et plus résidant dans les provinces du Canada, à l'exception des personnes vivant dans des réserves indiennes, des membres à plein temps des Forces armées et des pensionnaires d'institutions (par exemple les détenus de prison et les malades séjournant à l'hôpital ou dans une maison de repos pour plus de 6 mois). Les estimations mensuelles de l'emploi, du chômage et des inactifs se rapportent à une semaine bien précise chaque mois, soit normalement celle où tombe le quinzième jour du mois.

Des renseignements détaillés sur la collecte de données, la méthodologie et le contenu de l'EPA sont contenus dans le document *Guide de l'Enquête sur la population active* (n° 71-534-GIF au catalogue) dans le site web de Statistique Canada www.statcan.ca/francais/concepts/labour/index f.htm.

### Définitions et explications

La population active comprend les membres de la population civile hors institution âgés de 15 ans et plus qui avaient un emploi (personnes occupées) ou étaient en chômage pendant la semaine de référence.

Les personnes occupées sont celles qui, au cours de la semaine de référence:

- a) ont fait un travail quelconque
- b) avaient un emploi mais n'étaient pas au travail

Une personne est considérée à temps plein si elle travaille habituellement plus de 29 heures par semaine à son emploi principal. Une personne est considérée à temps partiel si elle travaille habituellement moins de 30 heures par semaine à son emploi principal.

Les chômeurs sont les personnes qui, au cours de la semaine de référence:

- a) étaient sans emploi, avaient activement cherché du travail au cours des quatre dernières semaines (y compris la semaine de référence) et étaient prêtes à travailler;
- b) n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais étaient temporairement mises à pied et étaient prêtes à travailler;
- c) n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais devaient commencer un nouvel emploi dans quatre semaines ou moins à compter de la semaine de référence, et étaient prêtes à travailler.

La partie de la population civile hors institution âgée de 15 ans et plus qui était ni occupée ni en chômage pendant la semaine de référence est classée comme **inactive**.

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, etc.) is the labour force in that group expressed as a percentage of the population for that group.

The employment rate (formerly the employment/population ratio) represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, etc.) is the number employed in that group expressed as a percentage of the population for that group.

The part-time rate represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

### Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. The seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

### Sampling Error

Estimates in this publication are based on the Labour Force Survey, a monthly survey of 52,000 households across Canada. Because they are based on a sample survey, the estimates are subject to sampling error. Changes in the level of any estimates between two months can be the result of a true change or sampling variability. In most tables in this publication an indicator of the sampling error is provided. Two thirds of the time, a change greater than the sampling error indicates a real change. Movements in estimates that are smaller than the sampling error are less likely to reflect a real change and more likely to be due to sampling variability. While the above is true for monthly movements, one can have more confidence in a series of consecutive movements in the same direction, even though some of the monthly movements may be smaller than the sampling error.

For comprehensive information on Labour Force Survey methodology, see the publication *Methodology of the Canadian Labour Force Survey*, catalogue no. 71-526-XPB.

Le taux de chômage représente le nombre de chômeurs exprimé en pourcentage de la population active. Le taux de chômage d'un groupe particulier (âge, sexe, etc.) est le nombre de chômeurs dans ce groupe, exprimé en pourcentage de la population active dans le même groupe.

Le taux d'activité représente la population active exprimée en pourcentage de la population de 15 ans et plus. Le taux d'activité d'un groupe particulier (âge, sexe, etc.) est la population active dans ce groupe exprimée en pourcentage de la population dans le même groupe.

Le taux d'emploi (antérieurement nommé rapport emploipopulation) représente le nombre de personnes occupées exprimé en pourcentage de la population de 15 ans et plus. Le taux d'emploi d'un groupe particulier (âge, sexe, etc.) est le nombre de personnes occupées dans ce groupe, exprimé en pourcentage de la population dans le même groupe.

Le taux de temps partiel représente le nombre de personnes occupées à temps partiel exprimé en pourcentage du nombre de personnes occupées. Le taux de temps partiel d'un groupe particulier (âge, sexe, etc.) est le nombre de personnes occupées à temps partiel dans ce groupe, exprimé en pourcentage du nombre de personnes occupées dans le même groupe.

#### Désaisonnalisation

Les fluctuations des séries chronologiques économiques sont causées par des mouvements saisonniers, cycliques et irréguliers. Une série désaisonnalisée est une série dont on a éliminé les effets des mouvements saisonniers. Ces derniers sont causés par des événements annuels réguliers comme les changements de température, les vacances, les cycles agricoles, de productions et de ventes au détail durant la période de Noël et de Pâques. La série désaisonnalisée contient à la fois des fluctuations irrégulières et des fluctuations cycliques à long terme.

Les données désaisonnalisées sont révisées chaque année afin de tenir compte des données courantes et produire des coefficients d'extrapolation prospective pour les 12 prochains mois. Les données d'extrapolation prospective seront l'objet de légères révisions dans les éditions ultérieures de la présente publication.

### Erreur d'échantillonnage

Les estimations contenues dans cette publication sont basées sur l'Enquête sur la population active, une enquête mensuelle de 52 000 ménages à travers le Canada. Étant donné qu'elles reposent sur une enquête par échantillon, ces estimations sont sujettes à des erreurs d'échantillonnage. Le changement dans le niveau d'une estimation entre deux mois peut donc être le résultat d'un changement réel ou d'une variation d'échantillonnage. Un indicateur de l'erreur d'échantillonnage est inclus dans la plupart des tableaux de cette publication. Deux fois sur trois, un changement plus grand que l'erreur d'échantillonnage indique un changement réel. Des variations moins élevées que l'erreur d'échantillonnage sont moins susceptibles de montrer des changements réels que des variations dues à l'échantillonnage. On peut avoir davantage confiance dans un ensemble de mouvements consécutifs dans la même direction, même si certains de ces mouvements sont plus petits que l'erreur d'échantillonnage.

Pour des renseignements plus complets sur la méthodologie de l'Enquête sur la Population Active, voir la publication *Méthodologie de l'enquête sur la population active*, n° 71-526-XPB au catalogue.

### SERVICES INDICATORS

## For and About Businesses Serving the Business of Canada ...

At last, current data and expert analysis on this VITAL sector in one publication!

he services sector now dominates the industrial economies of the world.
Telecommunications, banking, advertising, computers, real estate, engineering and insurance represent an eclectic range of services on which all other economic sectors rely.

Despite their critical economic role, however, it has been hard to find out what's happening in these industries. Extensive and time-consuming efforts have, at best, provided a collection of diverse bits and pieces of information ... an incomplete basis for informed understanding and effective action.

Now, instead of this fragmented picture, Services Indicators brings you a cohesive whole. An innovative quarterly from Statistics Canada, this publication breaks new ground, providing timely updates on performance and developments in:

- **Communications**
- Finance, Insurance and Real Estate
- **Business Services**

Services Indicators brings together analytical tables, charts, graphs and commentary in a stimulating and inviting format. From a wide range of key financial indicators including profits, equity, revenues, assets and liabilities, to trends and analysis of employment, salaries and output – PLUS a probing feature article in every issue, Services Indicators gives you the complete picture for the first time!

Finally, anyone with a vested interest in the services economy can go to Services Indicators for current information on these industries ... both at-a-glance and in more detail than has ever been available before – all in one unique publication.

If your business is serving business in Canada, or if you are involved in financing, supplying, assessing or actually using these services, *Services Indicators* is a turning point – an opportunity to forge into the future armed with the most current insights and knowledge.

Order YOUR subscription to Services Indicators today!

Services Indicators (catalogue no. 63-016-XPB) is \$116. In Canada, please add either GST and applicable PST or HST. Shipping charges: No shipping charges for delivery in Canada. For shipments to the United States, please add \$24. For shipments to other countries, please add \$40.

To order, write to Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6, Canada, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

If more convenient, fax your order to 1 877 287-4369 or (613) 951-1584 or call 1 800 267-6677 toll-free in Canada and the United States and charge to your VISA or MasterCard. Via e-mail: order@statcan.ca. Visit our Web Site at www.statcan.ca.

### INDICATEURS DES SERVICES

## Au sujet des entreprises au service des affaires du Canada et à leur intention...

Enfin regroupées en une publication, des données courantes et des analyses éclairées sur ce secteur ESSENTIEL!

e secteur des services domine à l'heure actuelle les économies industrielles du monde. Les télécommunications, les opérations bancaires, la publicité, l'informatique, l'immobilier, le génie et l'assurance représentent une gamme éclectique de services sur lesquels reposent tous les autres secteurs économiques.

En dépit de leur rôle critique sur le plan économique, il est toutefois difficile de savoir ce qui se passe dans ces branches d'activité. Des efforts considérables et fastidieux ont permis, au mieux, de rassembler une collection de renseignements fragmentaires divers... qui ne favorisent pas la compréhension avisée et la prise de mesures efficaces.

Remplacez maintenant ce tableau fragmentaire par l'image cohérente que vous offre *Indicateurs des services*. Cette publication trimestrielle innovatrice de Statistique Canada pénètre dans un domaine inexploré, fournissant des aperçus <u>opportuns</u> du rendement et des progrès dans les domaines suivants :

- Communications ...
- Finance, assurance et immobilier
- Services aux entreprises

Indicateurs des services rassemble des tableaux analytiques, des diagrammes, des graphiques et des observations en un mode de présentation stimulant et attrayant. En puisant à même une vaste gamme d'indicateurs financiers importants, allant notamment des profits, des capitaux propres, des recettes, de l'actif et du passif aux tendances et analyses de l'emploi, des salaires et de la production – à laquelle s'ajoute un article de fond exploratif dans chaque numéro, Indicateurs des services brosse pour la première fois un tableau complet!

Enfin, quiconque s'intéresse au secteur des services peut consulter *Indicateurs des services* pour trouver des renseignements courants sur ces branches d'activité... tant sous une <u>forme sommaire qu'à un niveau de détail n'ayant jamais encore été offert</u> – et ce, dans une même publication.

Si vous êtes de ceux qui fournissent des services aux entreprises canadiennes, ou si vous financez, fournissez ou évaluez ces services ou y avez en fait recours, *Indicateurs des services* représente un tournant – une chance de s'aventurer dans l'avenir en étant armé des réflexions et connaissances les plus actuelles.

Commandez dès aujourd'hui VOTRE abonnement à Indicateurs des services!

Indicateurs des services (n° 63-016-XPB au catalogue) coûte 116 \$. Au Canada, veuillez ajouter soit la TPS et la TVP en vigueur, soit la TVH. Frais de port : Aucuns frais pour les envois au Canada. Pour les envois à destination des États-Unis, veuillez ajouter 24 \$. Pour les envois à destination des autres pays, veuillez ajouter 40 \$.

Pour commander, écrivez à Statistique Canada, Division de la diffusion, Gestion de la circulation, 120, avenue Parkdale, Ottawa (Ontario) KIA 0T6, Canada, ou communiquez avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste qui figure dans la présente publication).

# Discover labour market trends in seconds

Labour Force Revue chronologique Historical Review de la population activ

## When you need a snapshot of the labour market

...when you need quick answers or in-depth analysis

...when you need to see historical movements

...when you need labour-related data for a presentation or report

...you'll find that the *Labour*Force Historical Review on
CD-ROM is the perfect solution.

This easy-to-use CD-ROM, issued annually, provides:

### Accurate, timely data...

state actual and seasonally adjusted, monthly and annual data

Statistics Statis Canada Canar

- ...plus historical information...
- over 20 years of data (from 1976 to 2000)

### ...in a tremendously useful format!

- with thousands of cross-classified data series
- and the functionality for easy export of the data into any spreadsheet package for data manipulation

### At the click of a mouse, access key variables, such as:

- employment and unemployment levels and rates
- demographic characteristics including age, sex, educational attainment and family variables
- national, provincial, metropolitan areas and economic regions
- sindustry, occupation, wages, union membership, job tenure
- workplace size and hours worked ...and much more.

## For more detailed information on this CD-ROM, visit our Web site at http://www.statcan.ca/english/ads/71F0004XCB/index.htm

The Labour Force Historical Review on CD-ROM (catalogue no. 71F0004XCB) is available for only \$195. In Canada, please add either GST and applicable PST or HST. Shipping charges: No shipping charges for delivery in Canada. For shipments to the United States, please add \$6. For shipments to other countries, please add \$10. To order the CD ROM, CALL 1 800 267-6677, FAX 1 877 287-4369 or MAIL your order to Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6, Canada. You may also order by E-MAIL: <a href="mailto:order@statcan.ca">order@statcan.ca</a> or contact your nearest Statistics Canada Regional Reference Centre: 1 800 263-1136.

## Découvrez les tendances du marché du travail en quelques secondes

### Que vous ayez besoin d'un instantané du marché du travail

- ... de réponses rapides ou d'analyses approfondies
  - ... de séries chronologiques
    - $\dots$  ou de données sur le marché du travail pour un exposé ou un compte rendu
    - ... le CD-ROM de la Revue chronologique de la population active est l'outil parfait.

Ce CD-ROM facile à utiliser, qui paraît chaque année, vous offre :

### des données exactes et à jour...

- brutes et désaisonnalisées, mensuelles et annuelles
- ... et des renseignements chronologiques...
- portant sur plus de 20 ans de données (de 1976 à 2000)
- ... présentés dans un format des plus pratiques!
- avec des milliers de séries croisées
- les fonctionnalités permettant d'exporter facilement les données vers tout tableur à des fins de manipulation

### Il suffit d'un clic de souris pour accéder à des variables clés :

- les niveaux et les taux d'emploi et de chômage
- les caractéristiques démographiques, dont l'âge, le sexe, le niveau d'instruction et les données familiales
- les données nationales, provinciales et relatives aux régions métropolitaines et économiques
- les données relatives aux branches d'activité, aux professions, aux salaires, à l'affiliation syndicale et à l'ancienneté d'emploi
- les données sur la taille du lieu de travail, le nombre d'heures de travail... et beaucoup plus.
